Disclaimer

Please follow these safety instructions for best performance, and long life for your monitor

Power Safety

- The AC plug isolates this equipment from the AC supply.
- The power supply cord serves as a power disconnect device for pluggable equipment. The socket outlet should be installed near the equipment and be easily accessible.
- This product should be operated from the type of power indicated on the marked label. If you are not sure of the type of power available, consult your dealer or local power company.
- An approved power cord greater or equal to H03VV-F or H05VV-F, 2G or 3G, 0.75mm2 must be used.

Care And Cleaning

- Cleaning. Always unplug your monitor from the wall outlet before cleaning. Clean the LCD monitor surface with a lint-free, non-abrasive cloth. Avoid using any liquid, aerosol or glass cleaners.
- Slots and openings on the back or top of the cabinet are for ventilation. They must not be blocked or covered. Your monitor should never be placed near or over a radiator or heat source, or in a built-in installation unless proper ventilation is provided.
- Never push objects or spill liquid of any kind into this product.

Servicing
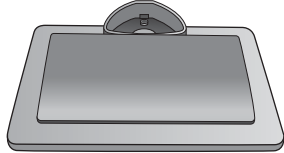

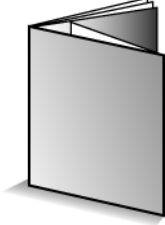

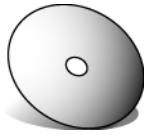

Do not attempt to service this product yourself, as opening or removing covers may expose you to dangerous voltages or other risks. If any of the above mentioned misuse or other accident such as dropping or mishandling occurs, contact qualified service personnel for servicing.

Table of Contents

1. Getting started

When unpacking please check you have the following items. If any are missing or damaged, please contact the place of purchase for a replacement.

BenQ LCD Monitor	
Monitor Base	
Quick Start Guide	
CD-ROM	
Power Cord (Picture may differ from product supplied for your region.)	
Video Cable: D-Sub	

Audio Cable	
USB Cable	
Video Cable: DVI-D (Optional accessory for models with DVI inputs, sold separately)	
Video Cable: DP (Optional accessory for models with DP inputs, sold separately)	

Consider keeping the box and packaging in storage for use in the future when you may need to transport the monitor. The fitted foam packing is ideal for protecting the monitor during transport.

2. Getting to know your monitor

• Above diagram may vary depending on the model.

• Picture may differ from product supplied for your region.

3. How to assemble your monitor hardware

☞ If the computer is turned on you must turn it off before continuing.
Do not plug-in or turn-on the power to the monitor until instructed to do so.

1. **Attach the monitor base.**

☞ Please be careful to prevent damage to the monitor.
Placing the screen surface on an object like a stapler or a
mouse will crack the glass or damage the LCD substrate
voiding your warranty. Sliding or scraping the monitor
around on your desk will scratch or damage the monitor
surround and controls.

Protect the monitor and screen by clearing a flat open area
on your desk and placing a soft item like the monitor
packaging bag on the desk for padding.

Gently lay the screen face down on a flat clean padded
surface.

While holding the monitor firmly against the desk, pull
the monitor stand arm upwards clear of the monitor.

Orient and align the stand base socket with the end of the
stand arm, then push them together. Tighten the
thumbscrew on the bottom of the monitor base as
illustrated.

Gently attempt to pull them back apart to check that they
have properly engaged.

Carefully lift the monitor, turn it over and place it upright
on its stand on a flat even surface.

Extend the stand to the maximum extended position. And
rotate the monitor 90 degrees counterclockwise as
illustrated.
You might want to adjust the monitor stand height. See **Adjusting the monitor stand height on page 11** for more information.
You should position the monitor and angle the screen to minimize unwanted reflections from other light sources.

-5°~ +20°
2. Connect the PC video cable

Either

☞ Do not use both DVI-D cable and D-Sub cable on the same PC. The only case in which both cables can be used is if they are connected to two different PCs with appropriate video systems. (Not available for analog-only models).

To Connect the D-Sub Cable
Connect the plug of the D-Sub cable (at the end without the ferrite filter) to the monitor video socket. Connect the other end of the cable (at the end with the ferrite filter) to the computer video socket.

Tighten all finger screws to prevent the plugs from accidently falling out during use.

To Connect the DVI-D Cable
Connect the plug of the DVI-D cable (at the end without the ferrite filter) to the monitor video socket. Connect the other end of the cable (at the end with the ferrite filter) to the computer video socket.

Or

Tighten all finger screws to prevent the plugs from accidently falling out during use.
To Connect the DP Cable

Connect the plug of the DP cable to the monitor video socket. Connect the other end of the cable to the computer video socket.

💡 The DVI-D format is used for direct digital connection between source video and digital LCD monitors or projectors. The digital video signals produce a superior quality picture than analog video signals.

☞ The video cable included in your package and the socket illustrations on the right may vary depending on the LCD model.
3. Connect the audio cable.

Connect the audio cable between the socket on the rear of the monitor (Line In) and your computer audio outlet.
You may connect headphones to the headphone jack found next to the Line In jack of the monitor.
4. Connect USB Devices.

I. Connect the USB cable between the PC and the monitor (via the upstream USB port at the back). This upstream USB port transmits data between the PC and the USB devices connected to the monitor.
II. Connect USB devices via other USB ports (downstream) on the monitor. These downstream USB ports transmit data between connected USB devices and the upstream port.
5. **Connect the power cable to the monitor.**

    Plug one end of the power cord into the socket labelled 'POWER IN' on the rear of the monitor. Do not connect the other end to a power outlet just yet.
6. **Route the cables via the cable clip.**
7. **Connect-to and turn-on the power.**

    Plug the other end of the power cord into a power outlet and turn it on.

☞ Picture may differ from product supplied for your region.
Turn on the monitor by pressing the power button on the right of the monitor.

Turn on the computer too, and follow the instructions in Section 4: Getting the most from your BenQ monitor on page 16 to install the monitor software.
Adjusting the monitor stand height

If you prefer to lower the monitor stand height, push the stand downward while holding both left and right sides of the monitor.
☞ Avoid placing hands near the bottom of the monitor stand as the descending stand might cause personal injuries. Keep children out of reach of the monitor while performing this operation.
To extend the monitor stand to a higher position, press the lower part of the height release on the stand while holding the bottom of the monitor at the same time. And pull the stand and the monitor upward together to the desired height.

Height release

☞ If the height release in the proceeding operation cannot be pressed down, press the top of the monitor once as illustrated on the right before you proceed.
Rotating the monitor

1. **Pivot the display.**

   Before rotating the monitor with a portrait viewing orientation, the display has to be rotated 90 degrees.

   Go to **Start** and **Control Panel** on your computer, select the properties or controller of the graphics processing units (GPU) on your computer. Select to rotate the display 90 degrees, and follow the on-screen instructions to complete the settings.

   ☞ Refer to the product specifications of your computer to find the GPU name. For details on the GPU settings, contact the customer service of the GPU.
2. **Fully extend the monitor and tilt it.**

   Gently lift the display up and extend the stand to the maximum extended position. Then tilt the monitor.

   ☞ The stand should be vertically extended to allow the monitor to rotate from landscape to portrait mode.

3. **Rotate the monitor 90 degrees clockwise as illustrated.**

   ☞ To avoid the edge of the LCD display hitting the monitor base surface while it is being rotated, do tilt and extend the monitor to the highest position before you start to rotate the display.
   You should also make sure there are no obstacles around the monitor and there is enough room for cables. You might need to route the cables again via the cable clip after the rotation.

4. **Adjust the monitor to the desired viewing angle.**

Viewing angle adjustment

You may position the screen to the desired angle with -5° to +20° monitor tilt, 90° (left and right total) monitor swivel, and 130 mm monitor height.
How to detach the stand base

1. **Prepare the monitor and area.**

   Turn off the monitor and the power before unplugging the power cable. Turn off the computer before unplugging the monitor signal cable.

   Protect the monitor and screen by clearing a flat open area on your desk and placing a soft item like a towel on the desk for padding, before laying the screen face down on a flat clean padded surface.

☞ Please be careful to prevent damage to the monitor. Placing the screen surface on an object like a stapler or a mouse will crack the glass or damage the LCD substrate voiding your warranty. Sliding or scraping the monitor around on your desk will scratch or damage the monitor surround and controls.

2. **Release the thumbscrew on the bottom of the monitor base and detach the monitor base as illustrated.**
Using the monitor wall mounting kit

The back of your LCD monitor has a VESA standard mount with 100mm pattern, allowing the installation of a wall mount bracket. Before starting to install a monitor wall mounting kit, please read the precautions carefully.

Precautions:

- Install your monitor and monitor mounting kit on a wall with flat surface.

- Ensure that the wall material is stable to support the weight of the monitor.

- Turn off the monitor and the power before disconnecting the cables from the LCD monitor.

1. **Remove the monitor base.**

    Lay the screen face down on a clean and well-padded surface. Detach the monitor base as instructed in How to detach the stand base on page 14.
2. **Remove the monitor stand.**

    Use a a cross-pointed screwdriver to release the screws that fixing the monitor stand to the monitor.The use of a magnetic-head screwdriver is recommended to avoid of losing the screws.

    Then pull the monitor stand backward away from the monitor.
    ☞ In case you intend to use your monitor on the stand in the future, please keep the monitor base, monitor stand, and screws somewhere safe for future use.

3. **Follow the instruction manuals of the wall mount bracket you purchased to complete the installation.**

4. Getting the most from your BenQ monitor

To gain the most benefit from your new BenQ color LCD flat screen monitor, you should install the custom BenQ LCD Monitor driver software as provided on the BenQ LCD Monitor CD-ROM.

The circumstances under which you connect and install your BenQ LCD Monitor will determine which process you need to follow to successfully install the BenQ LCD Monitor driver software. These circumstances relate to which version of Microsoft Windows you are using, and whether you are connecting the monitor and installing the software onto a new computer (without existing monitor driver software), or whether you are upgrading an existing installation (which already has existing monitor driver software) with a newer monitor.

In either case however, the very next time you turn on your computer (after connecting the monitor to your computer), Windows will automatically recognize the new (or different) hardware, and will launch its **Found New Hardware** wizard.

Follow the wizard instructions until it asks you to select a monitor model. At that point, click the **Have Disk** button, insert the BenQ LCD Monitor CD-ROM and select the appropriate monitor model. Further details and step-by-step instructions for either an automatic (new) or upgrade (existing) installation, see:

☞ • If you require a User Name and Password to login to your Windows computer, you must be logged on as an Administrator or as a member of the Administrators group in order to install the monitor driver software. Furthermore, if your computer is connected to a network which has security access requirements, network policy settings may prevent you from installing software on your computer.

• To check the name of the purchased model, refer to the specification label on the back of the monitor.

How to install the monitor on a new computer

This instruction details the procedure for selecting and installing the BenQ LCD Monitor driver software on a new computer which has never had a monitor driver installed before. This instruction is only suitable for a computer which has never been used before, and for which the BenQ LCD Monitor is the first ever monitor to be connected to it.

☞ If you are adding the BenQ LCD Monitor to an existing computer that has already had another monitor connected to it (and has monitor driver software installed), you should not be following these instructions. You should instead be following the instructions for How to upgrade the monitor on an existing computer.

1. Follow the instructions in How to assemble your monitor hardware on page 7.
    When Windows starts, it will automatically detect the new monitor and launch the **Found New Hardware Wizard**. Follow the prompts until it displays the option to **Install Hardware Device Drivers**.

2. Insert the BenQ LCD Monitor CD-ROM into a CD drive on the computer.

3. Check **Search for a suitable driver for my device** option, and click **Next**.

4. Check the option for CD-ROM drives (uncheck all others) and click **Next**.

5. Look to confirm that the wizard has selected the correct name of your monitor and click **Next**.

6. Click **Finish**.

7. Restart the computer.

☞ To find the suitable driver files for the purchased model, refer to the following table.

Driver files	Suitable models
BL2201	BL2201M, BL2201PT, BL2201PU
BL2400	BL2400PT, BL2400PU

How to upgrade the monitor on an existing computer

This instruction details the procedure for manually updating the existing monitor driver software on your Microsoft Windows computer. It is currently tested as compatible for Windows XP, Windows Vista, and Windows 7 Operating System (OS).

☞ The BenQ LCD Monitor driver for your model may well function perfectly with other versions of Windows, however, as at the time of writing, BenQ has done no testing of this driver on other versions of Windows and cannot guarantee its operation on those systems.

Installing monitor driver software involves selecting an appropriate information file (.inf) on the BenQ LCD Monitor CD-ROM for the particular model monitor you have connected, and letting Windows install the corresponding driver files from the CD. You need only steer it in the right direction. Windows has an Upgrade Device Driver Wizard to automate the task and guide you through the file selection and installation process.

See:

How to install on Windows 7 system

1. Open **Display Properties**.

   Go to **Start**, **Control Panel**, **Hardware and Sound**, **Devices and Printers** and right-click the name of your monitor from the menu.

   Alternatively, right-click the desktop and select **Personalize**, **Display**, **Devices and Printers**, and right-click the name of your monitor from the menu.

2. Select **Properties** from the menu.

3. Click the **Hardware** tab.

4. Click **Generic PnP Monitor**, and then the **Properties** button.

5. Click the **Driver** tab and the **Update Driver** button.

6. Insert the BenQ LCD Monitor CD-ROM into a CD drive on the computer.

7. In the **Update Driver Software** window, select the option **Browse my computer for driver software**.

8. Click **Browse** and navigate to the following directory: d:\BenQ_LCD\Driver\ (where d is the drive letter designator for the CD-ROM drive).

☞ The drive letter for your CD drive may differ from the example above depending upon your system - it may be 'D:' or 'E:' or 'F:' etc.

9. Select the correct folder name of your monitor from provided driver list, and click **Next**.

   This will copy and install the appropriate monitor driver files to your computer.

10. Click **Close**.

    You may be prompted to restart your computer after the driver update is complete.

How to install on Windows Vista systems

1. Open **Display Settings**.

    Right-click the desktop and select **Personalize** from the popup menu.

    Select **Display Settings** from the **Personalize appearance and sounds** window.

    The **Display Settings** window will display.

2. Click the **Advanced Settings** button.

    The **Generic PnP Monitor Properties** window will display.

3. Click the **Monitor** tab and the **Properties** button.

4. Click **Continue** in the prompted **User Account Control** window.

5. Click the **Driver** tab and the **Update Driver** button.

6. Insert the BenQ LCD Monitor CD-ROM into a CD drive on the computer.

7. In the **Update Driver Software** window, select the option **Browse my computer for driver software**.

8. Click **Browse** and navigate to the following directory: d:\BenQ_LCD\Driver\ (where d is the drive letter designator for the CD-ROM drive).

☞ The drive letter for your CD drive may differ from the example above depending upon your system – it may be 'D:' or 'E:' or 'F:' etc.

9. Select the correct folder name of your monitor from provided driver list, and click **Next**.

    This will copy and install the appropriate monitor driver files to your computer.

10. Click **Close**.

    You may be prompted to restart your computer after the driver update is complete.

How to install on Windows XP system

1. Open **Display Properties**.

   The quickest shortcut to **Display Properties** is through the Windows desktop.

   Right-click the desktop and select **Properties** from the popup menu.

   Alternatively, the Windows menu to **Display Properties** is located in **Control Panel**.

   In Windows XP version, Control Panel is located directly under the main **Start** menu item.

   The menu options displayed will depend upon which type of view is selected for your system.

   - Under the Classic view, click **Start** | **Control Panel** | **Display**.
   - Under the Category view, click **Start** | **Control Panel** | **Appearance and Themes** | **Change the screen resolution**.

   The **Display Properties** window will display.

2. Click the **Settings** tab and the **Advanced** button.

   The **Advanced Display Properties** window will display.

3. Click the **Monitor** tab and select the **Plug and Play Monitor** from the list.

   If there is only one monitor in the list, it will already be selected for you.

4. Click the **Properties** button.

   The **Monitor Properties** window will display.

   If the driver provider is listed as BenQ, and the model matches that of your new monitor, the proper drivers are already installed, and you need do nothing further. Cancel out of these property windows. However, if BenQ is not listed as the manufacturer, or the correct model is not currently shown, you will need to continue with these instructions.

5. Click the **Driver** tab and the **Update Driver** button.

   The **Hardware Update Wizard** will display. Follow the wizard instructions noting the steps below:

6. Insert the BenQ LCD Monitor CD-ROM into a CD drive on the computer you attached the monitor to.

7. Check the option **Install from a list or specific location** and click **Next**.

8. Check the option **Search for the best driver in these locations** and also check **Search removable media**, then click **Next**.

   Please wait while the wizard searches for drives and the BenQ LCD Monitor CD inserted in step 6. When completes, the wizard should have found and selected the BenQ driver on the CD appropriate to your monitor model.

9. Select (single-click) the correct name of your monitor from provided driver list on the CD, and click the **Next** button.

   This will copy and install the appropriate monitor driver files to your computer.

10. Click **Finish**.

    This will close the wizard and return you to the **Monitor Properties** window.

11. Click **Close**, **OK**, and **OK**.

    This will close the **Display Properties** windows. You may be prompted to restart your computer after the driver update is complete.

5. Picture optimization

The easiest way to obtain an optimal display from an analog (D-Sub) input is to use the **AUTO** key function. Press the **AUTO** key to optimize the currently displayed image to the screen.

☞ When you connect a digital video output using a digital (DVI or DP) cable to your monitor, the **AUTO** key and the Auto Adjustment function will be disabled, because the monitor will automatically display the best image.

💡 Please ensure that the connected graphic card on your computer is set to the native resolution of the monitor when you use the AUTO key function.

If you wish, you can always adjust the screen geometric settings manually using geometry menu items. To assist you in this endeavour, BenQ has provided a screen test image utility which you can use to check for screen color, grayscale and line gradient display.

1. Run the test program auto.exe from CD-ROM. You could also use any other image, such as the desktop of your operating system. However, we recommend that you use auto.exe. As you run auto.exe, a test pattern displays.

2. Press the **AUTO** key on the monitor.

3. Press the **MENU** key to access the monitor On-Screen Display (OSD) menu.

4. Use the ◀ or ▶ keys to select **DISPLAY** and press the **ENTER** key to enter the menu.

5. If you notice a vertical noise (like a curtain effect-shimmering of vertical lines), press the ◀ or ▶ keys to select **Pixel Clock** and press the **ENTER** key. Then press the ◀ or ▶ keys to adjust the monitor until the noise disappears.

6. If you notice a horizontal noise, press the ◀ or ▶ keys to select **Phase** and press the **ENTER** key. Then press the ◀ or ▶ keys to adjust the monitor until the noise disappears.

6. How to adjust your monitor

The control panel
1. **AUTO**: Adjusts vertical position, phase, horizontal position and pixel clock automatically.

2. **MENU** key: Activates OSD main menu and return to the previous menu or exit OSD.

3. ◄/**Custom** key: For Left/Decrease adjustment. The key is the hot key for designated functions. See Custom Key on page 37 for more information.

4. ►/**Display Mode** key: For Right/Increase adjustment. The key is the hot key for Display Mode.

5. **ENTER** key: Enters sub menus and select items. For models with DVI inputs, this key is also the hot key for Input.

6. **Power**: Turns the power on or off.

OSD = On Screen Display.
The hot keys will display a graduated scale for adjusting the value of that setting, and will only operate while the OSD menu is not currently displaying. Hot key displays will disappear after a few seconds of no key activity. See **Hot key mode on page 24**.

Hot key mode

The monitor keys perform as hot keys to provide direct access to particular functions whenever the menu isn't currently displaying on-screen.

Custom key

MODE: Standard
Press the ◀ key to display the functions that can be accessed by this key. Press the ◀ or ▶ keys to change the settings if needed. To change the default settings, see Custom Key on page 37 for more information.

Display Mode hot key

Display Mode: Full

Press the ▶ key continually to switch among **Full** and **Aspect**. The setting will take effect immediately.
See also Display Mode on page 32.

Input hot key (**not available for analog-only models**)

INPUT: D-Sub
Press the **ENTER** key to toggle between different PC video signal inputs that may be connected to your monitor.
The setting will take effect immediately.
See also Input on page 35.

Main menu mode

You can use the OSD (On Screen Display) menu to adjust all the settings on your monitor.

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.

Press the **MENU** key to display the following main OSD menu.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 |

DISPLAY   MODE: Standard

Auto Adjustment

H. Position	50	
V. Position	52	
Pixel Clock	50	
Phase	18	

◀ ▶ Move   ENTER Select   MENU Exit

There are 7 main OSD menus:

1. Display
2. Picture
3. Picture Advanced
4. Audio
5. System
6. Ergonomics
7. ECO

Use the ◀ (left) or ▶ (right) keys to highlight a menu item, and press the **ENTER** key to enter the Menu item settings.

The OSD menu languages may differ from the product supplied to your region, see "**Language on page 36**" under "OSD Settings" for more details.

For more information on each menu, please refer to the following pages:

Display menu

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.

1. Press the **MENU** key to display the main menu.

2. Press the ◀ or ▶ keys to select **DISPLAY** and then press the **ENTER** key to enter the menu.

3. Press the ◀ or ▶ keys to move the highlight to a menu item and then press the **ENTER** key to select that item.

4. Press the ◀ or ▶ keys to make adjustments or selections.

5. To return to the previous menu, press the **MENU** button.

Item	Function	Operation	Range
Auto Adjustment	Optimizes and adjusts the screen settings automatically for you. The **AUTO** key is a 'hot key' for this function. ☞ When you connect a digital video output using a digital (DVI or DP) cable to your monitor, the AUTO key and the **Auto Adjustment** function will be disabled.	Press the **ENTER** key to select this option and make adjustment.	

H. Position	Adjusts the horizontal position of the screen image.	Press the ◄ or ► keys to adjust the value.	0 to 100
V. Position	Adjusts the vertical position of the screen image.		0 to 100
Pixel Clock	Adjusts the pixel clock frequency timing to synchronize with the analog input video signal. Not applicable to a digital input signal. See also: Picture optimization on page 22.		0 to 100
Phase	Adjusts the pixel clock phase timing to synchronize with the analog input video signal. Not applicable to a digital input signal. See also: Picture optimization on page 22.		0 to 63

Picture menu

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.

1. Press the **MENU** key to display the main menu.

2. Press the ◀ or ▶ keys to select **PICTURE** and then press the **ENTER** key to enter the menu.

3. Press the ◀ or ▶ keys to move the highlight to a menu item and then press the **ENTER** key to select that item.

4. Press the ◀ or ▶ keys to make adjustments or selections.

5. To return to the previous menu, press the **MENU** button.

Item	Function	Operation	Range
Brightness	Adjusts the balance between light and dark shades.	Press the ▶ key to increase the brightness and press the ◀ key to decrease the brightness.	0 to 100
Contrast	Adjusts the degree of difference between darkness and lightness.	Press the ▶ key to increase the contrast and press the ◀ key to decrease the contrast.	0 to 100
Sharpness	Adjusts the clarity and visibility of the edges of the subjects in the image.	Press the ▶ key to improve the crispness of the display and press the ◀ key to have softness effect on the display.	1 to 5
Gamma	Adjusts the tone luminance. The default value (the standard value for Windows) is 2.2 or 3 (for BL2400PU).	Press the ▶ key to increase the gamma value (tone becomes darker) and press the ◀ key to decrease the gamma value (tone becomes lighter).	1.8 ~ 2.6 Or 1 ~ 5 (for BL2400PU) ☞ The range may vary by model.

Color - Press ENTER to enter the Color menu			
Color Temperature	Normal: Allows video and still photographs to be viewed with natural coloring. This is the factory default color.	Press the ◄ or ► keys to select this option.	
	Bluish: Applies a cool tint to the image and is factory pre-set to the PC industry standard white color.		
	Reddish: Applies a warm tint to the image and is factory pre-set to the news print standard white color.		
	User Mode: The blend of the Red, Green and Blue primary colors can be altered to change the color tint of the image. Go to the succeeding **Red**, **Green**, and **Blue** menus to change the settings.	Press the ◄ or ► keys and the **ENTER** key to select **Red**, **Green**, or **Blue**. Then use the ◄ or ► keys to make the color adjustments.	
Red Green Blue	Tailors the image color tint. Decreasing one or more of the colors will reduce their respective influence on the color tint of the image. (e.g. if you reduce the Blue level the image will gradually take on a yellowish tint. If you reduce Green, the image will become a magenta tint.)	Press the ◄ or ► keys to adjust the value.	0 to 100
Hue	Adjusts the degree of how we perceive colors.	Press the ◄ or ► keys to adjust the value.	0 to 100
Saturation	Adjusts the purity degree of colors.	Press the ◄ or ► keys to adjust the value.	0 to 100
Reset Color	Resets the custom color settings to the factory defaults.	Press the ◄ or ► keys to change the settings.	• YES • NO
Press MENU to leave the Color menu.			
AMA (BL2400PU only)	Improves the gray level response time of the LCD panel.	Press the ◄ or ► keys to change the settings.	• ON • OFF

Picture Advanced menu

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.

1. Press the **MENU** key to display the main menu.

2. Press the ◀ or ▶ keys to select **PICTURE ADVANCED** and then press the ENTER key to enter the menu.

3. Press the ◀ or ▶ keys to move the highlight to a menu item and then press the **ENTER** key to select that item.

4. Press the ◀ or ▶ keys to make adjustments or selections.

5. To return to the previous menu, press the **MENU** button.

Item	Function	Operation	Range
Picture Mode	Selects a picture mode that best suits the type of images shown on the screen. • Standard - for basic PC application. • Movie - for viewing videos. • Photo - for viewing still images. • sRGB - for better color matching representation with the peripheral devices, such as printers, DSCs, etc. • Eco - for saving electricity with low power consumption by providing minimum brightness for all running programs.	Press the ◀ or ▶ keys to change the settings.	• Standard • Movie • Photo • sRGB • Eco

Senseye Demo	Displays the preview of screen images under the selected mode from Picture Mode. The screen will be divided into two windows; the left window demonstrates images of Standard mode, while the right window presents the images under the specified mode.	Press the ◄ or ► keys to change the settings.	• ON • OFF
Dynamic Contrast	The function is to automatically detect the distribution of an input visual signal, and then to create the optimal contrast.	Press the **ENTER** key to select this option. Press the ◄ or ► keys to change the settings.	0 to 5

Display Mode	This feature is provided to allow aspect ratios other than 16:9 or 16:10 (depending on the purchased model) to be displayed without geometric distortion. • Overscan - Slightly enlarges the input image. Use this feature to hide annoying edge noise if present around your image. • Full - Scales the input image to fill the screen. Ideal for 16:9 or 16:10 (depending on the purchased model) aspect images. • Aspect - The input image is displayed without geometric distortion filling as much of the display as possible. Depending on the purchased model, 16:9 or 16:10 images will fill the screen horizontally while 4:3 or 5:4 images will fill the screen vertically. ☞ To find out the monitor aspect ratio of the purchased model, please check the Specification document on the provided CD.	Press the ◀ or ▶ keys to change the settings.	When the signal source is from a DVI or D-Sub source, and the input image is of non-wide aspect ratio: • Full • Aspect Or When the signal source is from a DP Video or D-Sub (VGA converted from Component) source: • Overscan • Full • Aspect

Color Format	Determines the color space (RGB or YUV) based on the following detected video signal: • D-Sub (VGA) from PC: The default Color Format is RGB. • D-Sub (Component) from a video device: The default Color Format is YUV. ☞ You might need to manually set the Color Format if colors shown on the monitor screen do not display properly. • DVI (for models with DVI inputs): Color Format is automatically set to RGB. • DP: Color Format is not selectable. In other words, Color Format is automatically set depending on the input video source.	Press the **ENTER** key to select this option. Press the ◀ or ▶ keys to change the settings.	• RGB • YUV

Audio menu

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.

<table>
<tr><td colspan="7" style="text-align:left">AUDIO</td><td>MODE: Standard</td></tr>
</table>

1. Press the **MENU** key to display the main menu.

2. Press the ◀ or ▶ keys to select **AUDIO** and then press the **ENTER** key to enter the menu.

3. Press the ◀ or ▶ keys to move the highlight to a menu item and then press the **ENTER** key to select that item.

4. Press the ◀ or ▶ keys to make adjustments or selections.

5. To return to the previous menu, press the **MENU** button.

Item	Function	Operation	Range
Volume	Adjusts the audio volume	Press the ▶ key to increase the volume and press the ◀ key to decrease the volume.	0 ~ 100
Mute	Mutes the audio input	Press the ◀ or ▶ keys to change the settings.	• ON • OFF

System menu

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.

SYSTEM	MODE: Standard
Input	D-sub
OSD Settings	
DDC/CI	
DP Auto Switch	OFF
Information	
Custom Key	
Reset All	

◄ ► Move   ENTER Select   MENU Back

1. Press the **MENU** key to display the main menu.

2. Press the ◄ or ► keys to select **SYSTEM** and then press the **ENTER** key to enter the menu.

3. Press the ◄ or ► keys to move the highlight to a menu item and then press the **ENTER** key to select that item.

4. Press the ◄ or ► keys to make adjustments or selections.

5. To return to the previous menu, press the **MENU** button.

Item	Function	Operation	Range
Input	Use this to change the input to that appropriate to your video cable connection type. ☞ Analog-only models do not have the Input function.	Press the ◄ or ► keys to change the settings.	• DVI • D-sub (VGA) • DisplayPort

OSD Settings - Press ENTER to enter the OSD Settings menu.			
Language	Sets the OSD menu language.	Press the ◄ or ► keys to change the settings. ☞ The language options displayed on your OSD may differ from those shown on the right, depending on the product supplied in your region.	• English • French • German • Italian • Spanish • Polish • Japanese • Czech • Traditional Chinese • Hungarian • Simplified Chinese • Serbo-Croatian • Romanian • Dutch • Russian • Swedish • Portuguese
H. Position	Adjusts the horizontal position of the OSD menu.	Press the ◄ or ► keys to change the settings.	0 to 100
V. Position	Adjusts the vertical position of the OSD menu.		0 to 100
Display Time	Adjusts the display time of the OSD menu.		• 5 Sec. • 10 Sec. • 15 Sec. • 20 Sec. • 25 Sec. • 30 Sec.

OSD Lock	Prevents all the monitor settings from being accidentally changed. When this function is activated, the OSD controls and hotkey operations will be disabled.	Press the ◄ or ► keys to change the settings. ☞ To unlock the OSD controls when the OSD is preset to be locked, press and hold the "MENU" key for 15 seconds to enter the "OSD Lock" option and make changes. Alternatively, you may use the ◄ or ► keys to select "NO" in the "OSD Lock" submenu from the "OSD Settings" menu, and all OSD controls will be accessible.	• YES • NO
Press **MENU** to leave the **OSD Settings** menu.			
DDC/CI*	Allows the monitor settings to be set through the software on the PC.	Press the **ENTER** key to select this option. Press the ◄ or ► keys to change the settings.	• ON • OFF
DP Auto Switch	When this function is activated, DP port will be in the input auto select loop. Otherwise, DP can only be selected by input select or by hot key.	Press the **ENTER** key to select this option. Press the ◄ or ► keys to change the settings.	• ON • OFF
Information	Displays the current monitor property settings.		• Input • Current Resolution • Optimum Resolution (best with the monitor) • Model Name
Custom Key	Sets the functions to be accessed by the custom key. After the key is set, it becomes a shortcut to activate or deactivate the designated function.	Press the **ENTER** key to select this option. Press the ◄ or ► keys to move the highlight to a menu item and then press the **ENTER** key to select that item.	• Eye Protect • Eye Protect Meter • ECO Sensor • ECO Sensor Meter • Smart Reminder • Picture Mode
Reset All	Resets all mode, color and geometry settings to the factory default values.	Press the ◄ or ► keys to change the settings.	• YES • NO

⌁ *DDC/CI, short for Display Data Channel/Command Interface, which was developed by Video Electronics Standards Association (VESA). DDC/CI capability allows monitor controls to be sent via the software for remote diagnostics.

Ergonomics menu

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.
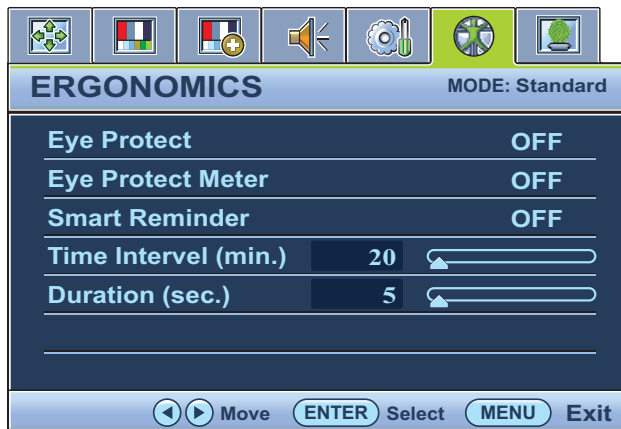

1. Press the **MENU** key to display the main menu.

2. Press the ◀ or ▶ keys to select **ERGONOMICS** and then press the **ENTER** key to enter the menu.

3. Press the ◀ or ▶ keys to move the highlight to a menu item and then press the **ENTER** key to select that item.

4. Press the ◀ or ▶ keys to make adjustments or selections.

5. To return to the previous menu, press the **MENU** button.

Item	Function	Operation	Range
Eye Protect	Your monitor comes with a light sensor, which detects the light condition around the monitor and adjusts the monitor backlight automatically. This is to protect your eyes from overexposure to bright light. If the light is sufficient, the monitor brightness is increased. If the monitor is in a poor light, the monitor brightness is decreased. ☞ If you prefer to adjust the monitor brightness manually, go to PICTURE > Brightness.	Press the **ENTER** key to select this option. Press the ◀ or ▶ keys to change the settings.	• ON • OFF
Eye Protect Meter	Sets to display the light condition around the monitor on the screen.	Press the **ENTER** key to select this option. Press the ◀ or ▶ keys to change the settings.	• ON • OFF
Smart Reminder	Decides to display the pop-up message that reminds you to rest your eyes.	Press the ◀ or ▶ keys to change the settings.	• ON • OFF

Time interval (min.)	Sets the interval of the reminder message.	Press the ◀ or ▶ keys to change the settings.	20 ~ 100
Duration (sec.)	Sets the time the reminder message lasts on the screen. ☞ Alternatively, when the reminder message is displayed, press any key except the power button to hide the message.	Press the ◀ or ▶ keys to change the settings.	5 ~ 25

Eco menu

Available menu options may vary depending on the input sources, functions and settings. Menu options that are not available will become grayed out.

ECO   MODE: Standard

ECO Sensor	OFF
ECO Sensor Meter	OFF
Sensor Range	Far

◄ ► Move (ENTER) Select (MENU) Exit

1. Press the **MENU** key to display the main menu.

2. Press the ◄ or ► keys to select **ECO** and then press the **ENTER** key to enter the menu.

3. Press the ◄ or ► keys to move the highlight to a menu item and then press the **ENTER** key to select that item.

4. Press the ◄ or ► keys to make adjustments or selections.

5. To return to the previous menu, press the **MENU** button.

Item	Function	Operation	Range
ECO Sensor	Your monitor comes with a proximity sensor (called ECO sensor), which detects your presence in front of the monitor within the set range. If the sensor detects no presence, the monitor is turned off in 40 seconds to save power. ☞ If the monitor is turned off by the ECO sensor, the power button flashes in green. If the ECO sensor detect no presence for over 2 hours, the monitor will be powered off. Press the power button to turn on the monitor.	Press the **ENTER** key to select this option. Press the ◄ or ► keys to change the settings.	• ON • OFF
ECO Sensor Meter	Sets to display the countdown to turn off the monitor.	Press the **ENTER** key to select this option. Press the ◄ or ► keys to change the settings.	• ON • OFF
Sensor Range	Decides how far the sensor can detect.	Press the **ENTER** key to select this option. Press the ◄ or ► keys to change the settings.	• Near • Middle • Far

7. Troubleshooting

Frequently asked questions (FAQ)

② **The image is blurred:**

☞ Read the instructions on the link "**Adjusting the Screen Resolution**" on the CD, and then select the correct resolution, refresh rate and make adjustments based on these instructions.

② **How do you use a VGA extension cable?**

☞ Remove the extension cable for the test. Is the image now in focus? If not, optimize the image by working through the instructions in the "**Adjusting the refresh rate**" section on the link "**Adjusting the Screen Resolution**". It is normal for blurring to occur due to conduction losses in extension cables. You can minimize these losses by using an extension cable with better conduction quality or with a built-in booster.

② **Does the blurring only occur at resolutions lower than the native (maximum) resolution?**

☞ Read the instructions on the link "**Adjusting the Screen Resolution**" on the CD. Select the native resolution.

② **Pixel errors can be seen:**

☞ One of several pixels is permanently black, one or more pixels are permanently white, one or more pixels are permanently red, green, blue or another color.

- Clean the LCD screen.
- Cycle power on-off.
- These are pixels that are permanently on or off and is a natural defect that occurs in LCD technology.

② **The image has a faulty coloration:**

☞ It has a yellow, blue or pink appearance.

Select MENU > PICTURE > Color > Reset Color, and then choose "YES" in the "Caution" message box to reset the color settings to the factory defaults.

If the image is still not correct and the OSD also has faulty coloration, this means one of the three primary colors is missing in the signal input. Now check the signal cable connectors. If any pin is bent or broken off, please contact your dealer to get necessary support.

② **No image can be seen:**

☞ Is the prompt on the display illuminated in green?

If the LED is illuminated in green and there is a message "Out of Range" on the screen, this means you are using a display mode that this monitor does not support, please change the setting to one of the supported mode. Please read the "**Preset display modes**" section from the link "**Adjusting the Screen Resolution**".

② **Faint shadow from the static image displayed is visible on the screen:**

☞
- Activate the power management function to let your computer and monitor go into a low power "sleep" mode when not actively in use.
- Use a screensaver to prevent the occurrence of image retention.

? **Is the prompt on the display illuminated in orange?**

☞If the LED is illuminated in orange, the power management mode is active. Press any button on the computer keyboard or move the mouse. If that does not help, check the signal cable connectors. If any pin is bent or broken off, please contact your dealer to get necessary support.

? **Is the prompt on the display not illuminated at all?**

☞Check the power supply mains socket, the external power supply and the mains switch.

? **The image is distorted, flashes or flickers:**

☞Read the instructions on the link "**Adjusting the Screen Resolution**" on the CD, and then select the correct resolution, refresh rate and make adjustments based on these instructions.

? **You are running the monitor at its native resolution, but the image is still distorted.**

☞Images from different input sources may appear distorted or stretched on the monitor running at its native resolution. To have the optimal display performance of each type of input sources, you can use the "Display Mode" function to set a proper aspect ratio for the input sources. See Display Mode on page 32 for details.

? **The image is displaced in one direction:**

☞Read the instructions on the link "**Adjusting the Screen Resolution**" on the CD, and then select the correct resolution, refresh rate and make adjustments based on these instructions.

? **The OSD controls are inaccessible:**

☞ • To unlock the OSD controls when the OSD is preset to be locked, press and hold the "MENU" key for 15 seconds to enter the "OSD Lock" option and make changes.

• Alternatively, you may use the ◀ or ▶ keys to select "NO" in the "OSD Lock" submenu from the "OSD Settings" menu (under SYSTEM), and all OSD controls will be accessible.

? **No sound can be heard from the built-in speakers:**

☞ • Check whether Line In is properly connected.

• Increase the volume (volume may be muted or too low).

• Remove your headphone and/or external speakers. (If they are connected to the monitor, the built-in speakers are automatically muted.)

? **No sound can be heard from the connected external speakers:**

☞ • Remove your headphone (if the headphone is connected to the monitor).

• Check whether the headphone jack is properly connected.

• If the external speakers are USB-powered, check whether the USB connection is OK.

• Increase the volume (volume may be muted or too low) on the external speakers.

? **No sound can be heard from the built-in speakers:**

☞ • Check whether Line In is properly connected.

• Increase the volume (volume may be muted or too low).

• Remove your headphone and/or external speakers. (If they are connected to the monitor, the built-in speakers are automatically muted.)

⑦ No sound can be heard from the connected external speakers:

☞ • Remove your headphone (if the headphone is connected to the monitor).

 • Check whether the headphone jack is properly connected.

 • If the external speakers are USB-powered, check whether the USB connection is OK.

 • Increase the volume (volume may be muted or too low) on the external speakers.

⑦ The light sensor of the monitor does not work well.

☞The light sensor is located at the front bottom of the monitor. Please check:

 • If the Eye Protect function is set to ON. Check **Ergonomics** > **Eye Protect**.

 • If there are any obstacles in front of the sensor that keep the sensor from detecting the light properly.

 • If there are any objects or clothing in bright colors in front of the sensor. Bright colors (especially white and fluorescent colors) reflect light and the sensor cannot detect the main light sources.

⑦ The ECO sensor of the monitor does not work well.

☞ • The ECO sensor is located at the front bottom of the monitor. Check if there are any obstacles in front of the sensor that keep the sensor from detecting your presence properly.

 • The colors and the materials of your clothes may affect the detection. Adjust the sensor range if needed. See Sensor Range on page 41 for more information.

 • Adjust the distance between you and the monitor.
If none of the proceeding actions works, it is probably because the materials of your clothes are unique and cannot be detected by the ECO sensor. Please be noted that this is neither a manufacturing defect nor is the sensor damaged. You should turn off the ECO sensor for now in **Eco** > **ECO Sensor**.

⑦ USB devices are not working:

☞ • Check whether upstream and downstream USB are properly connected.

 • Install a corresponding USB device driver if available.

 • The maximum power provided for each USB port on your monitor is 100 mA. Check if a message showing **USB Hub Power Exceeded** pops up in the notification area located in the lower right corner of the desktop of your computer when your USB device is connected. If so, your USB device needs more power than the USB hub can provide and thus is not workable. To find the power information of the connected USB device(s), right-click **My Computer** and go to **Properties**, **Hardware**, and **Device Manager**. Under **Universal Serial Bus controllers**, double-click **Generic USB Hub (4 ports)** and select **Power**.
