Optical Multi-touch

Optical Multi-touch (RP series)
The Optical Touch always gives responsive feedback with accurate positioning. You can touch the screen to pan, zoom and scroll images with your fingers through the Nextwindow™ technology. This eliminates the need for a mouse or keyboard, so you can operate education software or presentation like using a tablet to enjoy an engaging experience.

10-bit PID Panel

BenQ Interactive Flat Panels offer more efficient power-saving features without sacrificing display performance. The PID (Public Information Display) panel is made for extended daily use while keeping uniform brightness, high reliability and superior durability as the vivid 10-bit color offers smooth, natural color transitions in gradients.

Normal Panel

10-bit Panel

Anti-Glare Display

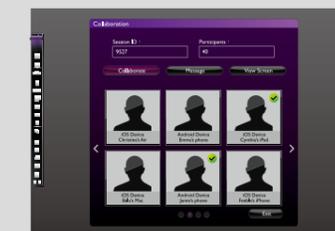

By effectively reducing reflection from the screen surface, the advanced AG glass employed by BenQ IFP RP 650+/RP550+ eliminates visual interference from glare to prevent eye fatigue and stress, and therefore elevates the appeal of classroom activities for students.

Front I/O placement (RP series)

Meticulously designed for teachers, the front-panel access to I/O interfaces like Type-A USB, HDMI and microphone input is a big timesaver. Teachers can effortlessly connect media players and microphones to the display without reaching for I/O ports on the side or back without seeing them. There's even a convenient tray reserved for IFP pens.

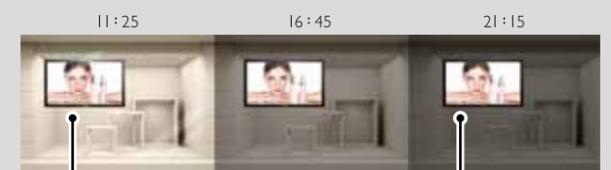

QDraw 3.0

With Qdraw 3.0 software, BenQ offers a full interactive solution for classroom. Intuitive software, QDraw 3.0 makes the teaching more productive and efficient.

Ambient Light Sensor

Classroom environments do not always have uniform ambient brightness, thus our displays are designed to compensate for this. For instance, the standard daytime brightness setting could be too strong for the afternoon or evening, resulting in sore eyes and fatigue. BenQ displays with ambient light sensors can automatically adjust brightness according to ambient light to make viewing more comfortable.

Comfortable brightness for high ambient light environment

But too high brightness makes eyes stressed and tired
