Friendly Features

Face Tracking Function

BenQ Digital Cameras can automatically detect and track faces and then adjust the focus to ensure that people are perfectly captured in both color tone and clarity.

Super Shake-Free Mode and Shake-Free Hotkey

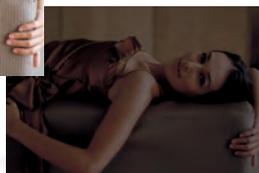

The unique Super Shake-Free mode (SSF) in BenQ Digital Cameras, which includes an ISO 2000 high light-sensitivity portrait mode, guarantees that every shot you take turns out sharp and clear. For fast-moving subjects or situations where it is difficult to hold the camera stably, you can boost the anti-shake effect by simply pressing the Shake-Free hotkey.

Wise Zoom Function

Whenever you need to get a closer view of a subject in the distance, turn on the Wise Zoom function to get up to 30x zoom while maintaining a clear and detailed image.

Before

After Z-lighting

Z-Lighting Function

Taking photos when the subject is illuminated from behind can result in an overly dark image that can be troublesome to fix even with image software. The new Z-Lighting function (selectable during playback) enables you to instantly adjust the brightness of a subject that has been underexposed due to excessive backlighting or insufficient flash.
