BenQ ULTRA-THIN Double Sided Signage

DH55IC/ DL550C/ DH55IF/ DL550F

ULTRA-THIN Design

The BenQ Dual Side Display set with its aero – thin panel design, is much slimmer than the previously marketed version of the dual side display. The overall size of the hanging Ceiling-Type Dual Side display set is less than 25mm, and can be used in wider spaced areas like department stores, convenient stores, shopping malls, airports, train stations, etc.

Eternal Light Display Panel

The D Series has an amazing average life of 50,000 hours – enough for several years of non-stop service.

Rotational Axis Display

BenQ pays extra attention on scenarios where portrait modes communicate better. The PID panel employs a structure featuring more solid fixing points on all edges to prevent "Mura" image,distortion common on vertically positioned consumer displays.

High Brightness

DH55IF and DH55IC provide high brightness up to 700 nits in both front and back sides display for the customers who are pursuing brighter screen and for semi-outdoor application.
Flexible Installation

F series: F series can be applied to various designs, such as ceiling mount or wall mount, based on user's different preference and also can be one of the decorations in the room.

C series: C series contains wheels that allow you to place the display anywhere you want.
